### **DETAILED ACTION**

1. This Office Action is a response to the remarks filed April 15, 2008. Claims 2 and 3 have been amended; claim 3 has been cancelled; no claims have been added.
2. Applicant's arguments, see remarks, filed April 15, 2008 with respect to claims 1, 2, 4 and 5 have been fully considered and are persuasive. The rejection of claims 1, 2, 4 and 5 has been withdrawn.
3. Claims 1, 2, 4 and 5 are now pending.

### ***Allowable Subject Matter***

4. Claims 1, 2, 4 and 5 are allowed.
5. The following is examiner's statement of reasons for allowance:

The present claims are allowable over the closest references: Okuhara et al. (U. S. Patent 5,102,775) and Minoru et al. ((JP 11-327139 A).

Okuhara et al. disclose light sensitive compositions and image forming method using the compositions. The composition comprises (A) a photocurable resin having light sensitive groups capable of being crosslinked or polymerized by light irradiation and ionic groups, (B)' a sensitizer which is excited by absorption of visible light and has a property to interact with the resin (A), (C) a water-insoluble polymerization initiator and optionally, (D) at least one specific nitrogen- containing compound (abstract).

The photocurable resin (A) has anionic or cationic groups besides the light sensitive groups. Anionic group such as a carboxylic group is contained in an amount such that the acid value of the photocurable resin falls within the range of 20 to 300 mg

Art Unit: 1796

KOH/g resin (col. 4, lines 1-10). The anionic photocurable resin having (meth)acryloyl groups as the light sensitive groups may be prepared by linking a glycidyl group-containing unsaturated compound to an acrylic resin having a high acid value. The acrylic resin of a high acid value may be obtained by copolymerizing ethylenically unsaturated acid, such as acrylic acid or methacrylic acid with at least one unsaturated monomer. Disclosed examples of glycidyl group-containing unsaturated compound to be linked to the acrylic resin include glycidyl acrylate and glycidyl methacrylate (col. 4, lines 46-68, col. 5, lines 1-6).

Minoru et al. discloses resin compositions capable of being developed by aqueous alkali solution. The photocurable resin comprises a carboxyl group-containing polymer modified by a glycidyl group-containing unsaturated monomer of the general formula (I).

However, Okuhara et al. and Minoru et al. do not disclose or fairly suggest the method of forming a hydrogel from the light sensitive coating composition as per claim 1, and the formed hydrogel as per claim 4.

6. As of the date of this Notice of Allowability, the Examiner has not located or identified any reference that can be used singularly or in combination with another reference including Okuhara et al. and Minoru et al. to render the present invention anticipated or obvious to one of ordinary skill in the art.

7. In the light of the above discussion, it is evident as to why the present claims are patentable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delay, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reason for Allowance".
